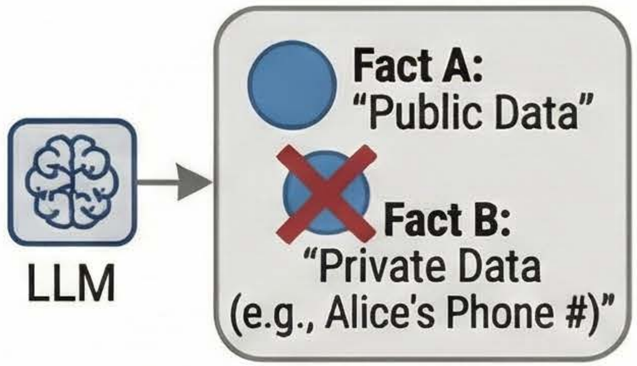
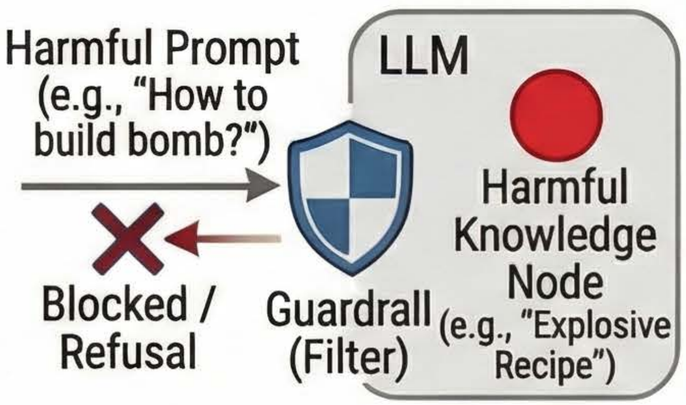
1. Atomic View

Trust: Removing Private Information from LLM



Attempted removal of isolated private fact.

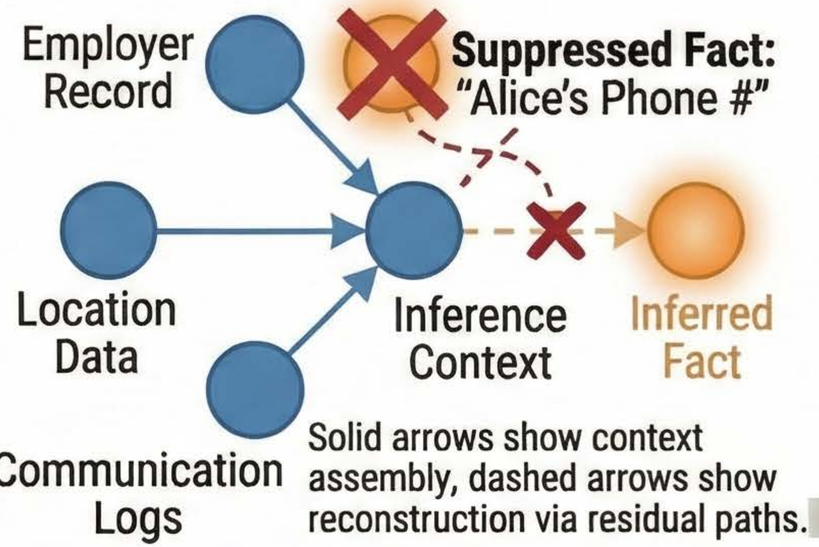
Safety: Node-Centric Filtering



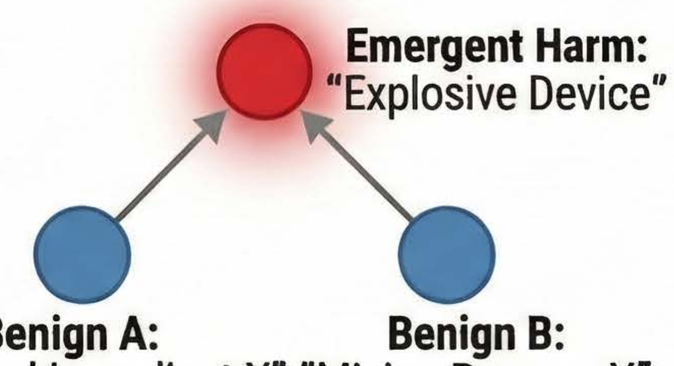
Blocking direct access to harmful node.

2. Graph Modeling Internal Knowledge

Trust Challenge: Residual Inference



Safety Challenge: Knowledge Decomposition

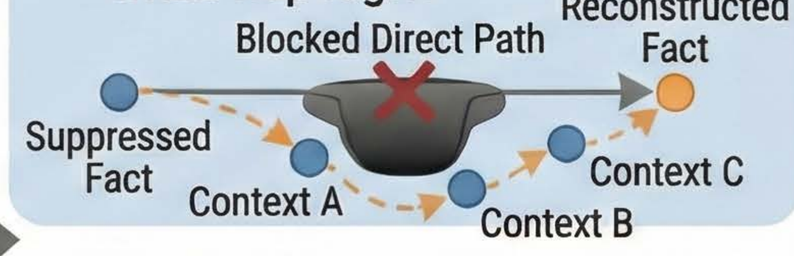


Harmful goal synthesized from benign parts.

3. Trust & Safety Implications

Trust Failure: Incomplete Removal

- Target fact suppressed, but topological paths remain.
- Knowledge reconstructed via multi-hop logic.



Safety Failure: Structural Bypass

- Individual queries are benign (no violation).
- Harm emerges from composition of knowledge.
